* Current Coal Statistical Regions of northern, central and southern are defined by a latitudinal reference. The northern coal statistical region's southern boundary is 22°38'S just south of the Queensland town of Dysart. The central boundary is defined as being between 22°38'S and 24°S latitude which passes through the town of Calliope. South of 24°S latitude is considered the southern coal statistical region for statistical purposes only. These lines do not follow local government areas, they are straight lines drawn along the latitude from east to west across the state of Queensland.
